Admin Web Functionalities

Module	Functionality	Description
1. Admin Authentication Module	1.1. Admin Login	Validates administrator credentials and grants secure access to the admin web system.
	1.2. Admin Logout	Safely terminates the administrator session to prevent unauthorized access.
	1.3. Role-Based Access Control	Limits system features and actions based on the administrator's assigned role and permissions.
	1.4. Password Management	Allows administrators to securely change or reset their account password.
	1.5. Session Management	Manages administrator sessions and automatically prevents access after session expiration.
2. Admin Dashboard Module	2.1. View User Summary	Displays the total number of registered clients, service providers, active users, and suspended users.
	2.2. View Service Summary	Displays the total number of services, approved services, pending services, and reported services.
	2.3. View Booking Summary	Displays the total number of bookings according to their current status.
	2.4. View Verification Summary	Shows the number of pending, approved, and rejected service provider verification requests.
	2.5. View Reports Summary	Displays the number of pending, investigated, resolved, and rejected reports.
	2.6. View Recent Activities	Displays recent activities and important system events for administrators to monitor.
	2.7. View Platform Analytics	Provides graphical summaries of users, providers, services, bookings, and overall platform activity.

Module	Functionality	Description
3. User Management Module	3.1. View All Users	Displays all registered users and their basic account information.
	3.2. Search Users	Allows administrators to search users using information such as name, email, or user ID.
	3.3. Filter Users	Allows administrators to filter users according to account type, status, verification status, and other criteria.
	3.4. View User Profile	Displays the user's personal information, account details, services, bookings, ratings, and activity.
	3.5. Edit User Information	Allows authorized administrators to update editable user information when necessary.
	3.6. Suspend User Account	Temporarily restricts a user's access to the platform due to violations or administrative actions.
	3.7. Activate User Account	Restores access to a previously suspended or deactivated user account.
	3.8. Ban User Account	Permanently restricts a user's access due to serious or repeated violations.
	3.9. Delete User Account	Allows authorized administrators to remove a user account from the platform.
4. Service Provider Management Module	4.1. View Service Providers	Displays registered service providers and their professional information.
	4.2. View Provider Profile	Displays the provider's profile, skills, experience, portfolio, services, ratings, and booking history.
	4.3. Review Verification Request	Allows administrators to review submitted provider information and verification documents.
	4.4. Approve Provider Verification	Confirms that a service provider has passed the platform's verification requirements.
	4.5. Reject Provider Verification	Rejects a provider verification request when the submitted information does not meet requirements.
	4.6. Request Additional Information	Allows administrators to request additional documents or information from a service provider.
	4.7. Suspend Service Provider	Temporarily restricts a provider from offering or managing services on the platform.
	4.8. Remove Provider Verification	Removes the verified status of a provider when necessary.

Module	Functionality	Description
5. Service Management Module	5.1. View All Services	Displays all services submitted by registered service providers.
	5.2. Search Services	Allows administrators to search services by title, provider, category, or other information.
	5.3. Filter Services	Allows administrators to filter services according to category, status, approval status, and other criteria.
	5.4. Review Service Submission	Allows administrators to inspect service information before approving it for publication.
	5.5. Approve Service	Makes a submitted service available to clients after it passes administrative review.
	5.6. Reject Service	Prevents a service from being published when it violates platform requirements or guidelines.
	5.7. Edit Service Information	Allows authorized administrators to modify service information when necessary.
	5.8. Hide Service	Temporarily removes a service from public visibility without permanently deleting it.
	5.9. Feature Service	Highlights selected services to increase their visibility within the platform.
	5.10. Delete Service	Removes a service from the platform when it is no longer allowed or needed.
6. Service Category Management Module	6.1. View Service Categories	Displays all available service categories and subcategories.
	6.2. Add Service Category	Allows administrators to create new categories for organizing available services.
	6.3. Edit Service Category	Allows administrators to update category names and information.
	6.4. Delete Service Category	Removes unused or invalid service categories from the system.
	6.5. Manage Subcategories	Allows administrators to create, edit, and manage service subcategories.
	6.6. Enable or Disable Category	Controls whether a category can be selected or displayed within the platform.

Module	Functionality	Description
7. Booking Management Module	7.1. View All Bookings	Displays all client bookings and their corresponding service provider and service information.
	7.2. View Booking Details	Displays complete booking information including client, provider, service, schedule, and booking status.
	7.3. Search Bookings	Allows administrators to search bookings using booking ID, client, provider, or service information.
	7.4. Filter Bookings	Allows administrators to filter bookings according to status, date, provider, client, and service.
	7.5. Monitor Booking Status	Allows administrators to monitor pending, confirmed, active, completed, cancelled, and disputed bookings.
	7.6. View Booking History	Displays the complete history and status changes of a booking.
	7.7. Cancel Booking	Allows authorized administrators to cancel a booking when necessary.
	7.8. Manage Booking Disputes	Allows administrators to review and manage bookings that have been disputed by clients or providers.
8. Reviews and Ratings Management Module	8.1. View Reviews and Ratings	Displays reviews and ratings submitted by clients regarding service providers and services.
	8.2. Search Reviews	Allows administrators to search reviews by user, provider, service, or other information.
	8.3. Filter Reviews	Allows administrators to filter reviews based on ratings, reports, and status.
	8.4. Review Reported Feedback	Allows administrators to inspect reviews that have been reported for inappropriate or misleading content.
	8.5. Hide Review	Temporarily removes a review from public visibility while it is being reviewed.
	8.6. Remove Review	Permanently removes a review that violates the platform's guidelines.
	8.7. Restore Review	Restores a previously hidden review when it is determined to be valid.

Module	Functionality	Description
9. Reports and Moderation Module	9.1. View User Reports	Displays reports submitted against users for possible violations or inappropriate behavior.
	9.2. View Service Reports	Displays reports submitted against services that may violate platform policies.
	9.3. View Review Reports	Displays reports submitted against reviews or ratings.
	9.4. View Message Reports	Displays reported messages that may contain inappropriate, abusive, or suspicious content.
	9.5. Investigate Report	Allows administrators to investigate the reported account, service, review, or activity.
	9.6. Add Investigation Notes	Allows administrators to record notes and findings during the investigation process.
	9.7. Resolve Report	Marks a report as resolved after the appropriate administrative action has been completed.
	9.8. Reject Report	Marks a report as invalid when no violation is found.
	9.9. Take Moderation Action	Allows administrators to take appropriate actions such as warning, suspending, or banning accounts and removing inappropriate content.
10. Dispute Management Module	10.1. View Disputes	Displays booking disputes submitted by clients or service providers.
	10.2. View Dispute Details	Displays the complete dispute information, involved users, booking details, evidence, and submitted statements.
	10.3. Review Dispute Evidence	Allows administrators to examine screenshots, files, messages, and other evidence submitted by involved parties.
	10.4. Review Dispute History	Displays previous actions and updates related to the dispute.
	10.5. Add Dispute Notes	Allows administrators to record internal notes regarding the investigation.
	10.6. Resolve Dispute	Allows administrators to make a final administrative decision regarding a dispute.
	10.7. Close Dispute	Marks a resolved dispute as officially closed.
11. Notifications and Announcements Module	11.1. View Notifications	Displays system notifications and administrative alerts.
	11.2. Send Announcement	Allows administrators to send announcements to users or service providers.
	11.3. Target Notifications	Allows administrators to send notifications to all users, clients, service providers, or selected users.
	11.4. Schedule Announcement	Allows administrators to schedule announcements for a specific date and time.
	11.5. View Notification History	Displays previously sent notifications and announcements.

Module	Functionality	Description
12. Provider Recognition Module	12.1. Manage Provider Badges	Allows administrators to create and manage recognition badges for qualified service providers.
	12.2. Assign Provider Badge	Allows administrators to assign appropriate badges to service providers.
	12.3. Remove Provider Badge	Allows administrators to remove a badge when a provider no longer meets its requirements.
	12.4. Manage Featured Providers	Allows administrators to highlight selected providers within the platform.
	12.5. Manage Top-Rated Providers	Allows administrators to monitor and recognize providers with high ratings and service performance.
13. Reports and Analytics Module	13.1. Generate User Reports	Produces reports containing user registration, account status, and user activity information.
	13.2. Generate Provider Reports	Produces reports containing provider registration, verification, service, and performance information.
	13.3. Generate Service Reports	Produces reports showing service listings, categories, approvals, popularity, and status.
	13.4. Generate Booking Reports	Produces reports showing booking activity and booking status.
	13.5. Generate Review Reports	Produces reports containing ratings, reviews, and review moderation information.
	13.6. Generate System Activity Reports	Produces reports of important activities and actions performed within the system.
	13.7. Export Reports	Allows authorized administrators to export generated reports for documentation and analysis.
14. Support Management Module	14.1. View Support Tickets	Displays support requests submitted by clients and service providers.
	14.2. Search Support Tickets	Allows administrators to locate support requests using ticket ID, user, subject, or other information.
	14.3. Filter Support Tickets	Allows administrators to filter tickets according to category and status.
	14.4. View Ticket Details	Displays the user's concern, submitted information, responses, and ticket history.
	14.5. Respond to Support Ticket	Allows administrators to respond to users regarding their submitted concerns.
	14.6. Assign Support Ticket	Allows a support administrator to assign a ticket to another authorized staff member.
	14.7. Resolve Support Ticket	Marks a support request as resolved after the concern has been addressed.

Module	Functionality	Description
15. Admin Management Module	15.1. View Administrators	Displays all administrator accounts registered in the system.
	15.2. Add Administrator	Allows authorized administrators to create a new administrator account.
	15.3. Edit Administrator	Allows authorized administrators to update administrator account information.
	15.4. Activate or Deactivate Administrator	Controls whether an administrator account can access the admin web system.
	15.5. Manage Roles	Allows authorized administrators to create, edit, and manage administrative roles.
	15.6. Manage Permissions	Allows administrators to assign specific system permissions to administrative roles.
16. Security and Audit Log Module	16.1. View Audit Logs	Displays records of important actions performed by administrators within the system.
	16.2. Search Audit Logs	Allows administrators to search recorded system activities.
	16.3. Filter Audit Logs	Allows administrators to filter logs by administrator, action, module, and date.
	16.4. View Login Activity	Displays administrator login and logout activities for security monitoring.
	16.5. Monitor Security Events	Allows authorized administrators to monitor suspicious or security-related system activities.
17. System Settings Module	17.1. Manage General Settings	Allows administrators to configure general platform information and system preferences.
	17.2. Manage Marketplace Settings	Allows administrators to configure rules related to service providers, services, and marketplace operations.
	17.3. Manage Booking Settings	Allows administrators to configure booking rules, cancellation policies, and other booking-related settings.
	17.4. Manage Notification Settings	Allows administrators to configure system notification preferences.
	17.5. Manage Platform Policies	Allows administrators to manage terms, privacy policies, community guidelines, and other platform policies.
	17.6. Manage System Settings	Allows authorized administrators to configure general technical and operational system settings.
18. Data Management Module	18.1. Export System Data	Allows authorized administrators to export selected system records for administrative and documentation purposes.
	18.2. Archive Records	Allows authorized administrators to archive old or inactive records without immediately deleting them.
	18.3. Restore Archived Records	Allows authorized administrators to restore eligible archived records.
	18.4. Manage Deleted Records	Allows authorized administrators to review and manage records that have been removed from active system use.

Module	Functionality	Description
19. Logout Module	19.1. Admin Logout	Safely terminates the administrator's current session and returns the administrator to the login page.
